- Sealed Bearings
- Disassemble quickly for storage
- Total weight - approx. 100 lbs
- 1 year Warranty\*
- Three screen size options
  - 1/4" Fine expanded metal screen
  - 1/2" Standard expanded metal screen
  - 3/4" Coarse expanded metal screen

## Easy to Use

Adjust Multi-Screener rear legs to a position where the back side of the unit is higher than the front. This is achieved more easily if the unit is on a slight downhill slope rather than an uphill position. It is, however recommended that the unit be used on level ground to ensure the operator's safety.

Place one wheelbarrow below screen area of the Multi-Screener and another wheelbarrow in front of the Multi-Screener to catch debris.

Connect the power cord to an electricity source via a heavy duty extension cord, which is suitable for outdoor use.

Shovel material to be separated onto top, back area of the Multi-Screener. The angle of the screens will determine the rate at which the material passes over the screens. For sandy or dry materials a greater angle is suitable. For more dense or heavier materials a lesser angle will work best.

## Pricing

Multi-Screener	\$749.00
Screens	\$ 48.95/set
Cont. US Shipping	\$185.00
Delivery time	check website
